

IndianOil

**Indian Oil Corporation Limited
Requires E&P specialists**

PETROPHYSICIST

IndianOil requires the services of a Petrophysicist with 10+ years of experience, having expertise in open hole (wire line and LWD), cased hole and production logging tools in clastic and carbonate regimes, quantitative interpretation of logs, reservoir analysis and reserve estimations, probability and stochastic modeling, core analysis (Conventional & Special), RFT Analysis (Subsurface & Surface Fluid Sampling) and well planning / delivery.

The individual should also have adequate experience in Techlog or compatible software suite.

RESERVOIR ENGINEER

IndianOil requires the services of a Reservoir Engineer with 10+ years experience of working with a multi-disciplinary team and having specific expertise in analysing subsurface and surface field data, performing reservoir simulation studies and contributing to an optimal long term drainage strategy. The individual should have adequate experience in reservoir characteristic analysis, estimation of reserves and classification as per SEC guidelines, generation of production profiles and field development strategies under different scenarios, quantitative interpretation of well testing data, well performance / stimulation analysis and reservoir modeling.

Expertise in commercial evaluation of assets / properties along with software familiarity would be necessary.
